Keshav Shrivastava

Agentic AI Engineer

keshav.shrivastava.soc@gmail.com 9301278710 linkedin.com/keshavshrivastava

SUMMARY

Agentic AI Engineer focused on developing Python-based AI applications using Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and tool-integrated workflows. Hands-on project experience in building and testing AI solutions, integrating APIs, and designing workflows that produce context-grounded, structured outputs. Familiar with Python, FastAPI, LangGraph, prompt engineering, and Git/GitHub. Interested in building reliable, practical AI systems for real-world business problems, with an emphasis on testing, workflow control, and measurable performance.

PROFESSIONAL EXPERIENCE

Independent Agentic AI Engineer — Project-Based Experience **06/2025 – Present** | Remote

Agentic Customer Support & Resolution Platform

- Developed an AI-powered customer support application designed to classify incoming tickets, retrieve relevant knowledge-base information, and generate context-grounded response drafts.
- Built an LLM-driven workflow to process support requests, apply policy checks, and guide tickets toward appropriate resolutions or escalation.
- Implemented retrieval-augmented generation (RAG) to ground responses in relevant support documentation and reduce reliance on unsupported model-generated answers.
- Designed stateful workflow orchestration using [LangGraph, if implemented] to coordinate ticket processing, response generation, validation, and escalation steps.
- Integrated [FastAPI, if implemented] to expose backend functionality and organize AI processing through API endpoints.
- Added controlled tool execution, permission checks, and human approval for sensitive support actions, keeping consequential decisions subject to review.
- Tested the application against representative support scenarios and reviewed outputs for relevance, policy compliance, and workflow correctness.
- Maintained the project on GitHub, documenting its implementation, setup requirements, and technical decisions.

Technical Skills: Python, LLMs, RAG, prompt engineering, LangGraph, FastAPI, API integration, workflow orchestration, Git/GitHub.

PROJECTS

Agentic Customer Support & Resolution Platform, Technologies: Python | LLMs, RAG | LangGraph | FastAPI

- Designed an AI-assisted support workflow to classify customer queries, retrieve relevant knowledge-base content, and generate context-grounded response drafts.
- Structured the workflow into distinct stages for ticket analysis, information retrieval, response generation, and escalation.
- Incorporated policy validation and human-review checkpoints to improve the reliability of AI-generated responses.
- Planned controlled tool execution for support actions requiring authorization or human approval.
- Identified evaluation criteria covering answer relevance, retrieval quality, policy compliance, and workflow reliability.
- **GitHub: https://github.com/01-Keshav/Agentic Customer Support & Resolution Platform**

Enterprise AI Knowledge & Workflow Agent, Technologies: Python | LLMs | RAG | FastAPI | PostgreSQL | LangGraph

- Designed an AI knowledge assistant that retrieves information from business documents and generates answers grounded in relevant source material.
- Structured a retrieval workflow to identify relevant document passages and support source-backed responses.
- Planned workflow automation capabilities for task creation and email drafting, with human approval before consequential actions.
- Defined evaluation areas including retrieval relevance, answer faithfulness, citation accuracy, and workflow success.
- Focused on building maintainable AI application components that connect language models, document retrieval, and backend services.
- **GitHub: https://github.com/01-Keshav/Enterprise-AI-Knowledge-Workflow-Agent**

EDUCATION

Master of Computer Applications (MCA), Sagar Institute of Research & Technology (SIRT), Bhopal **2026 – 2028** | Bhopal

Relevant Technical Focus: Python Programming, Data Structures & Algorithms, Database Management Systems, Software Engineering, System Design, Artificial Intelligence & Machine Learning, Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and API & Backend Development.

SKILLS

Programming
Python | Regular Expressions | Asynchronous Processing

Agentic AI & RAG
Retrieval-Augmented Generation (RAG) | LangGraph, Knowledge Retrieval | AI Workflow Orchestration | Human-in-the-Loop Workflows

AI Application Engineering
Document Retrieval | Context-Grounded Response Generation | Workflow Validation | AI Output Evaluation

Additional Skills
System Design Fundamentals | Software Engineering Fundamentals | Debugging | AI Automation

Generative AI & LLM'S
Large Language Models (LLMs) | Google Gemini API | Prompt Engineering | LLM Application Development

Backend Development
FastAPI | REST APIs | API Integration | Request Handling

Developer Tools
Git | GitHub | Python Virtual Environments

CERTIFICATES

- Python Essentials 1
- Exploring Cybersecurity IBM
- Drop Certified Security Course
- Python Essentials 2
- Google AI Educator Series for India
